

Recent Past- Privacy Policy

May 23, 2017

This application requests some privacy-relevant permissions from its users.

It does not, by itself, transfer any data to third parties; all collected data is saved to the device only and will not be transmitted in any way.

Solely for the purpose of in-app purchases, the app will interact with Google Play Services, which in turn may access personal data as per their privacy policy.

The app is free of any ads, thus further protecting the user's privacy.

Summary

Privacy relevant permissions are for the following purposes and will be used for the following services:

Permissions

- Microphone: used to continuously record audio, once the user starts recording.
- External Storage: used to store recorded audio, when the user chooses to.
- In-app Purchase: the user can buy additional recording time.

The app does not require any network permissions and will work completely offline, except for in-app purchases as mentioned above.

Full policy

Types of Data collected

This application does not collect any personal data by itself. For the purpose of in-app purchases, a third party (Google Play Store) may identify the user and collect data; for this, the privacy policy of the third party will apply.

Failure to provide certain permissions may make it impossible for this application to provide its services.

Transparency of Actions

The microphone is only used after the user starts recording, and will stop once the user stops the recording. A permanent notification will indicate the fact, while the app is recording.

External storage is solely accessed to write recordings to an audio file. This will only happen upon the request of the user. The user can also choose the location of these audio files.

Personal data may be processed when the user chooses to buy an extension of recording time through Google Play in-app purchases. At no point will the app itself collect and transfer any personal data.

Privacy of Others

This app can be used in ways that violate the privacy of others, e. g. by recording conversations without the other person's knowledge. The user of this app assumes fully responsibility for using the app in a way that conforms with local laws.
